Rafael Advanced Defense Systems has launched ImiLite M, a standalone smart mobile video terminal for UAV mission enhancement which supports the UAV unit commander or a remote payload operator in carrying out the assigned mission.

The ImiLite M receives video from an analog or a digital source and displays it on the screen along with the payload's ground footprint.

It weighs approximately 8.8lb, and features a 10/100 base-t ethernet USB 2.0 external interface and a touch screen, and provides visual and voice alerts whenever a movement is detected in the image.
